(a) Raw citations vs. rank
7 articles, h-index = 4
Raw citations
Paper rank k (by raw citations)
excess citations
above h ignored
recent top-10% paper (#2)
has 3 citations (< h)
h × h
(h = 4)
#1
#2
#3
#4
#5
#6
#7
(b) Paper percentile vs. rank
7 articles, l3 = 4.40 (unbounded)
Paper citation percentile
Paper rank k (by percentile)
recent paper #2
rises to .925
width = 1 per paper
(unbounded x-axis)
(c) Percentile vs. peer productivity
7 articles (53rd pct.), area = 0.28
Productivity percentile (≤ k articles)
#1, #2 get width 0
(no peer has < 3 papers)
widest at mode
(#4–#5)
stops at 0.53
